AcePrint

PDF Catalogs from Structured Data

What Is AcePrint?

AcePrint is a powerful PDF generation tool which takes the pain out of creating printed catalogs from structured application data.

Better Than Desktop Publishing (DTP)

InDesign® and QuarkXpress® are great publishing tools, but they have steep learning curves and cannot easily handle common automotive catalog requirements such as complex automated pagination, long tables and repeated footnotes. With AcePrint, once you define the catalog, anyone can produce final, print-ready PDFs with the press of a button.

Powerful Typesetting

Good looking catalogs demand more than simple "report writer" functionality. That's why AcePrint includes professional typesetting features such as character pair-kerning, advanced justification, circled and squared footnotes, real leader dots, hanging indents, letterspacing, superscripts, subscripts, shrink-to-fit, unicode fonts and rotated type.

Powerful Tables

Create complex "Application Table" sections from structured, pre-sorted data files. You have complete control over placement, headings, borders, fills, footnote references, embedded tag processing, in-cell images, grouping, keep logic, conditional layouts, empty value display, auto-spanning, wrapped footnotes, etc.

Powerful Pagination

Support complex page formats including newspaper-style columns, multi-level running heads (with continued logic), telltale heads, mirrored margins, tumb tabs, multi-referenced footnotes, page-specific justification, folio placement, conditional layouts, watermarks and much more.

Powerful PDF Features

Embed TrueType and OpenType fonts. Lock-down your document content to protect proprietary information so it cannot be extracted and used for other purposes. Automatically create "Bookmarks" for Sections and Make/Model or other groupings. Include PDF metadata.

Build Entire Catalogs

AcePrint lets you define the entire document including cover, table of contents, marketing pages (via merged PDFs), indexes, application and numerical sections, so creating the catalog is a simple, one-step process.

Illustrated Sections

We've made it really simple to create grid-based illustrated sections. Just select an image "manifest file" (along with the image directory), set up the layout and watch it create beautiful pages.

Simple Pricing Schedule

Licensing is based on the number of catalogs you need to create. Call for pricing.
